Art Unit: 1722

Continuation of 11. does NOT place the application in condition for allowance because:

Applicant's argument that the statements in the specification are sufficient to rebut the Examiner's *prima facie* case of obviousness is not persuasive. Applicants allege that the statement in the specification that the germanium range and the thickness range are critical is sufficient to establish unexpected results and rebut the Examiner's case of prima facie obviousness. However, the applicant must show that the particular range is critical, generally by showing that the claimed range achieves unexpected results relative to the prior art range. (MPEP 2144.05 III). The burden is on applicant to establish results are unexpected and significant. MPEP 716.02(b). It is well settled that unexpected results must be established by factual evidence. MPEP 716.01(c) [R-2]. Applicant's statement in the specification is a mere conclusion and lacks evidence to support the conclusion. A mere allegation of patentability is not sufficient. There is no evidence merely a broad statement of criticality.

Also, the portion of the specification relied upon by applicant teaches the synergistic effect is also dependant on oxygen, nitrogen, and carbon concentrations, which are not claimed. Thus, the portion relied upon in the specification to teach unexpected results is not commensurate in scope with the instantly claimed invention which merely teaches thickness and germanium concentration without claiming oxygen, nitrogen and carbon concentrations. The portion of the specification relied upon by applicant is narrower than the instantly claimed invention.
